Fitness Business Success In Utah

Daniela Binns, Aubrey Coons, Sedona Dettwiler

Approximately 20% of new businesses fail within the first two years, 50% within five years, and roughly 65-70% by year 10

Main Research Question

Can neighborhood characteristics and business category predict whether a fitness business will thrive in Utah?

Thriving: currently open, has a Yelp rating ≥ 4.0, and has at least 10 reviews — a composite signal of quality and community engagement.

Data

- Yelp Fusion API — 1,081 Utah fitness businesses
  - Rating, review count, category, price tier, coordinates
  - 7 categories: gyms, yoga, pilates, crossfit, martial arts, rock climbing, personal trainers
- U.S. Census ACS 2022 (5-year) — ZCTA-level demographics
  - Median income, home value, education, age distribution, population

Derived features:

- Competition density (businesses within 1km and 3km haversine radius)
- market_gap = prime-age pop / (gyms in zip + 1)
- income_per_competitor = median income / (3km competitors + 1)
- gym_density_per_1k = gyms per 1,000 residents

Coverage: 84xxx Utah zip codes with population ≥ 5,000

Feature	Source	Description
`category_group`	Yelp	Grouped category: general_gym, mind_body, martial_arts, personal_training, climbing_outdoor, other
`price`	Yelp	Price tier (1–4, imputed with median)
`median_income`	Census ACS	Median household income by ZCTA
`median_home_value`	Census ACS	Median home value by ZCTA
`median_age`	Census ACS	Median age by ZCTA
`pct_bachelors`	Census ACS	% population with bachelor's degree
`pct_prime_gym_age`	Census ACS	% population aged 20–44
`total_pop`	Census ACS	Total population by ZCTA
`competition_1km`	Derived (haversine)	Fitness businesses within 1km radius
`competition_3km`	Derived (haversine)	Fitness businesses within 3km radius
`market_gap`	Derived	`pct_prime_gym_age × total_pop / (gyms_in_zip + 1)`
`gym_density_per_1k`	Derived	Gyms per 1,000 residents in zip
`income_per_competitor`	Derived	Median income / (competition_3km + 1)

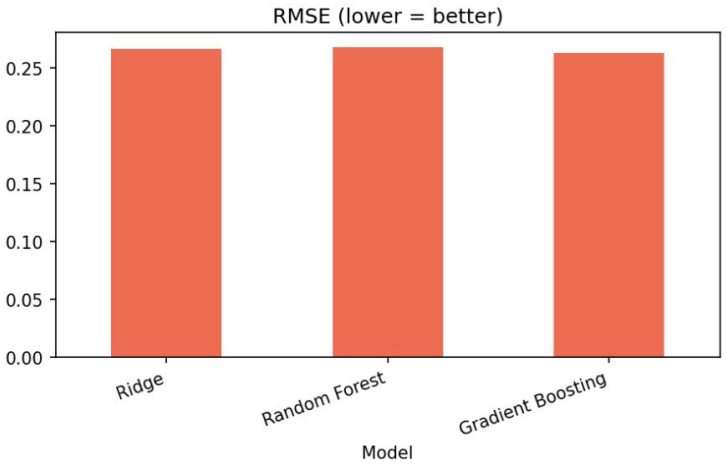
Supervised Models

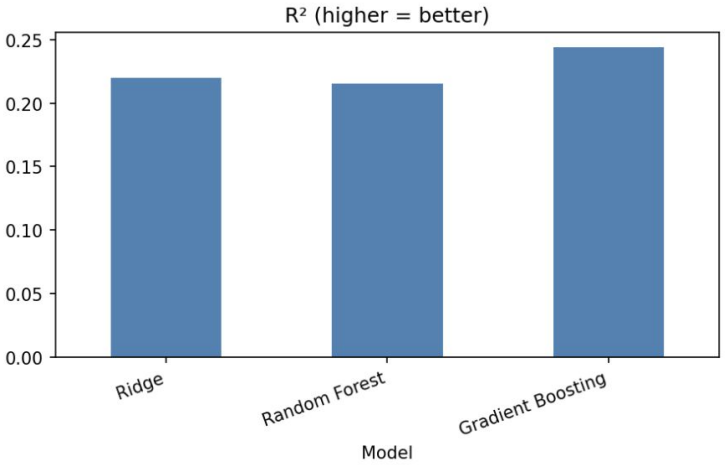
Two Tasks

- Classification - Will a business thrive?
- Regression - How successful will it be?

Models used

- Logistic Regression
- Random Forest
- Gradient Boosting





Supervised Models - Results

Classification

Model	Best Params	AUC	Accuracy
Logistic Regression	C=0.1	0.923	82.1%
Random Forest	depth=None, trees=200, split=2	**0.927**	**87.9%**
Gradient Boosting	lr=0.05, depth=3, trees=100	0.892	84.8%

Regression

Model	Best Params	RMSE	R^2
Ridge	alpha=100	0.278	0.220
Random Forest	depth=5, trees=100	0.279	0.215
Gradient Boosting	lr=0.05, depth=3, trees=200	**0.263**	**0.244**

Takeaways

Fitness businesses in Utah thrive when they operate in the right *category* in the right *market context* — specifically, high-income neighborhoods where competition hasn't yet saturated demand.

- **Random Forest classifier achieves AUC = 0.927** — strong predictive signal for thriving/not thriving
- **Business Categories** have strong impact
- **Competition** is the single most useful location signal
- **K-Means reveals 8 distinct market archetypes** that explain why geographic location matters beyond just income or density alone

For a new gym owner: open a specialized gym in an affluent suburban Utah zip with few existing competitors and a large 20–44-year-old population.
